

SEVIM

medium early, suitable for
production of French fries

Sevim is very suitable for markets demanding high yield and large sized grading tubers.

VARIETY DESCRIPTION

QUALITY

Cooking type B, no discoloration after cooking, very good suitable for production of French fries after harvest, low sensitivity to mechanical damage, internal defects and black spots, starch content 13–14 %.

YIELD

Very high marketable yield, large sized uniform grading

RESISTANCES

- › Nematodes Ro 1, 3, 4, 5
- › Y-Virus (PVY) very high
- › potato leaf roll high
- › late blight very high
- › black leg very high
- › common scab high

TUBER

Oval, shallow eyes, yellow skin, yellow flesh

PLANT

Tall, very strong, white flower rapid development and foliage cover

FERTILIZATION

N-supply up to 140 kg N is recommended. **Phosphorus** and **potassium** according to local standard, application of micronutrients in dry years via leaves.

PLANTING

Sevim can be produced on all types of soil. Seed treatment against rhizoctonia is recommended. Apical sprout should be removed.

For production of French fries SEVIM should be planted in rows allowing 34–36 cm between tubers.

PLANT PROTECTION

No metribuzin sensitivity, due to a good tolerance to late blight spraying intervals can be less than average, haulm killing by splitting technique.

STORAGE

Very good storability

This variety description is based on official trials and our own experience. For potatoes are natural products we can not undertake liability for the given description. Sevim was bred conventional without using any gene modifying methods.
