

CAPRI

very early
consumption variety

Capri is a very early and tough variety,
which gets mature very quickly.

VARIETY DESCRIPTION

QUALITY

Cooking type B, good taste, yellow flesh (after cooking as well), very low sensitivity to internal defects.

YIELD

for early harvesting: high marketable yield with large sized tubers.

RESISTANCES

- > Nematodes Ro 1, 4
- > Y-Virus (PVY) high
- > potato leaf roll medium – high
- > late blight high
- > black leg high
- > common scab high
- > potatoe wart disease 1

TUBER

Shapely, oval tubers, shallow eyes, smooth and bright-yellow skin, yellow flesh.

PLANT

intermediate type, white flowers, rapid youth development.

AGRONOMIC ADVICE

Capri has medium demands to soil and water supply. Treatment against *Rhizoctonia solani* is recommended.

It should be planted in rows allowing 28 – 30 cm between in a well-prepared seedbed. Capri prefers a harmonic fertilization.

Spraying should be done in usual intervals.

This variety description is based on official trials and our own experience. For potatoes are natural products we can not undertake liability for the given description. Capri was bred conventional without using any gene modifying methods.
