QUALITY

Cooking type A; excellent taste; deep yellow and pure flesh colouration; very low susceptibility for internal discolouration and black spots.

YIELD

Medium to high number of tubers; regular calibration with high marketable yield.

RESISTANCES

- › Nematodes Ro 1, 4
- › Y-Virus (PVY) high
- › potato leaf roll high
- › late blight high
- › black leg high
- › common scab high
- › potatoe wart disease 1, 2, 6, 18

TUBER

Long oval, smooth skin, shallow eyes.

PLANT

White flowers.

AGRONOMIC ADVICE

Megusta should be planted in rows allowing 30-32 cm in a well-prepared seedbed. Seed tubers should be warmed up before planting; Treatment against *Rhizoctonia solani* is recommended; Megusta shows no sensitive reaction to late Metribuzin application; Due to a good tolerance to late blight, spraying intervals can be less than average; Megusta has a good storage ability.

This variety description is based on official trials and our own experience. For potatoes are natural products we can not undertake liability for the given description. Megusta was bred conventional without using any gene modifying methods.
