

PETRA

early ware potato with
large growing tubers

NEW
RELEASES

**PETRA gives good results even by difficult
conditions like drought and heat.**

QUALITY

cooking type B, very good taste
yellow flesh, no discoloration after
cooking, starch content 12 – 13%

YIELD

very high marketable yield, good
calibration, large tuber size

RESISTANCES

- > Wart disease 1
- > PCN Ro 1
- > Y-Virus (PVY) very good
- > potato leaf roll virus (PLRV) good
- > early blight very good
- > late blight good
- > common scab very good

TUBER

oval-longoval, very shallow eyes,
yellow flesh, smooth skin

PLANT

strong erect stem, white flower,
rapid foliage development

PLANTING

suitable for all types of soil; treatment
against rhizoctona is recommended,
distance in row 28 – 32 cm, 2 cm deeper
than average

FERTILISATION

120 – 140 kg N / ha incl. N-min and N-org
Phosphorus 100 kg / ha
Potassium min. 300 kg / ha depending on
yield, Magnesium 60 – 80 kg

PLANT PROTECTION

not sensitive to Metribuzin,
routine protective control of late blight is
recommended

HARVEST / STORAGE

check skin set before harvesting, avoid
mechanical damage, PETRA is suitable for
a long term storage
